

International Day of Medical Physics 2014

To raise awareness of our profession, the International Organization for Medical Physics celebrates annually the International Day of Medical Physics (IDMP) on November 7. The theme of IDMP 2014 is '**Looking into the Body: Advancement in Imaging through Medical Physics**'. This is an excellent opportunity to promote the role of medical physicists in the worldwide medical scene. **All regional and national organizations are requested to inform their members, announce the IDMP on their websites, publish articles in press and organize activities such as lectures open to the general public and press appearances.**

Please click on <http://www.iomp.org/?q=content/international-day-medical-physics> to visit the new IDMP website. Two posters for the IDMP 2014 can be downloaded in printable format at: <http://www.iomp.org/idmp/index.php/posters>.

IOMP is planning to enrich the IDMP website with material to raise awareness about our profession and a list of activities being organized by regional and national member organizations. Please send us short reports on your plans associated with IDMP, photos, videos and any other material to be uploaded on the website. Help us interconnect colleagues worldwide and encourage them to become fully involved in activities focused on raising awareness of our profession. For any information, comments or suggestions please contact the chairman of the IOMP education and training committee, prof. John Damilakis (john.damilakis@med.uoc.gr).
